Art Unit: 2614

1. The following is a quotation of the first paragraph of 35

U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The following is noted:

1) The "prior art" described in applicants disclosure utilized a "two-dimensional chroma" component to derive color temperature. Allegedly, applicant's invention only required a "one-dimensional chroma" component to derive the color temperature.

2) As disclosed, applicants' invention comprises two embodiments; i.e. that shown in figure 4 and that shown in figure 7. In both embodiments, in order to derive a color temperature from the "one-dimensional chroma" component, it

Art Unit: 2614

is clearly necessary to load/provide each system with a table of mapping data (i.e. @ 210a of figure 4 and @ 320 of figure 7). The instant disclosure, however, fails to teach/describe how these required tables are generated and/or derived. Without these tables, it is clearly impossible to derive the color temperature from the one-dimensional chroma component as is described and claimed. For this reason, the instant disclosure does not appear to enable that which is claimed.
